Scholars Academy win Magna award

He’s a winner!

Levander Blackstock Jr., a fifth-grade student at Homewood Elementary School, came out on top of the city of Conway’s recent poster contest designed to increase recycling & Compost awareness. He is the winner of the Students Against-Rolling Pollution (SARP) poster contest. He received a framed photograph of himself with Mayor Alisa Joye, a bag of goodies from the Horry County Solid Waste Authority, which helped build the city contest. Levander’s poster will be made into a decal, which will be used on the sides of the city’s recycling trucks. There were 74 entries in the contest. Levander was accompanied at the Conway City Council meeting Monday night by his mom Melissa Sumpner, his stepdad Jazoo Thomas and his sister Keondre Sumpner. Pictured here are assistant city administrator Barbara Blain Gilles, Levander, Sumpner, and Embro-Boooks with the Solid Waste Authority.

Hearty County Schools has been selected as an Honorable Mention recipient in the American School Board Journal’s 16th annual Magna Awards program. HCS was recognized for its efforts to offer advanced learning opportunities to more than 20,000 students for its Scholars Academy. The Scholars Academy is a partnership with HCS and Coastal Carolina University to provide advanced learners with an enriched, accelerated education. Students may take Advanced Placement and college courses on the university campus and earn college credits while earning high school diploma. The Magna Awards recognize districts across the country for outstanding programs that advance student learning and encourage community involvement in schools and communities.

An independent panel of school board members, administrators, and other educators selected winners from more than 330 submissions. This year’s winners were selected based on three enrollment categories: less than 2,000 students, 2,000 to 20,000, and 20,000 and above.

This past Friday at the American School Board Journal initiated the Scholars Academy in 1993 to recognize school boards for taking bold and innovative steps to improve their education programs.

CCU storm drains: Students attack pollution

A band he calls the strongest of his 13 years on the road — the Wilson Family Band — is one of the bands that has never played on stage before. The band that has never played on stage before.

“Those are many things people can do to help with stormwater pollution,” she said. “And by getting students and adults involved in the project, we can help to get more done and spread the word throughout the neighborhood.

Along with educating the students, Muench, Greoski and other volunteers are working and taking data from the storm drains to see how the factors and other factors affect them.

“We are looking at the amount of water near the drains, the height that may be present, if anything is in the drains and any solids coming from it,” Muench said. “That way we can see how the project is going and how storm drains are affected.

Muench said along with educating the students, Muench, Greoski and other volunteers are working and taking data from the storm drains to see how the weather and other factors affect them.

“Many people are practicing this,” she said. “And by getting students and adults involved in the project, we can help to get more done and spread the word throughout the neighborhood.
