

# Involve Your Neighborhood in Storm Drain Marking

*Making a Difference One Drain at a Time*

**Water quality affects us all.  
In order to ensure healthy water,  
we all need to do our part!**

**Water going down a storm drain often carries pollutants which flow directly to our streams, rivers and oceans without being treated.**

**WHAT:** Storm drain markers are glued near the drains to remind community members not to dispose of anything into these devices.

**WHERE:** In your neighborhood.

**WHO:** The entire neighborhood can participate in storm drain marking; however, younger children will need adult supervision.

**HOW:** An environmental educator from Coastal Carolina University will lead the marking and also give an introductory presentation before the event.

**WHEN:** Contact us, and we'll help you set the date.

***This project is supported by Horry County Stormwater and the Coastal Waccamaw Stormwater Education Consortium.***
